Baer Consulting, Inc. and SecureAgent Business Partnership Provides Disaster Recovery and Enhanced Data Backup Solutions

CONIFER, CO and TULSA, OK (August 21, 2009) – There's a constant need for new and more effective technology to migrate data from tape to disk, so that it's more easily recoverable in case of a disaster. SecureAgent Software and Baer Consulting, Inc. (BCI) today announced a partnership to provide disaster recovery and enhanced data backup solutions. Combining both companies' expertise provides an end-to-end solution to disaster recovery and backups. Together, the **Secure Data Solution®**—SecureAgent Software's enhanced backup and recovery solution—and BCI's experience in facilities management, colocation hosting services, and systems support creates a superior solution that uses virtual tape images to improve remote disaster recovery, data protection, and automated tape movement for mainframe, AS/400 and Open Systems environments.

The patented *Secure Data Solution* (SDS) disk-to-disk technology delivers increased performance reliability; lower operating costs, and enhanced productivity. The SDS can drastically reduce or even completely eliminate physical tapes and tape drives, reducing the cost of maintenance, off-site tape couriers/storage, and logistics. Proprietary software features ensure data compression and encryption at the highest legal levels throughout the process. Unlike traditional tape, the SDS can provide virtual tape images that can be read concurrently by multiple processes, increasing throughput and reducing wait times.

Company executives at both Secure Agent Software and Baer Consulting, Inc. feel their combined strengths provide customers with a superior disaster recovery tool that will enhance regulatory compliance, while increasing efficiency and effectiveness in their day-to-day operations.

Baer Consulting, Inc.
Founded in 1982, Baer Consulting Inc. (BCI) provides systems software administration and management. BCI's primary business is to assist clients with selection, implementation, and administration of IBM-compatible operating environments. BCI provides systems software programming, operations, and network support to Fortune 1000 and other large companies. It operates two technology centers in Denver, Colorado, from which it provides colocation, disaster recovery, and co-hosting services.

The product expertise and depth of BCI's on-staff resources are unmatched in the industry. Support and services are provided in multiple strategic areas; library and storage management, network management, Disaster Recovery and overall system security. In addition, BCI has extensive experience with OEM product installations, z/OS, Open Edition (OMVS), capacity planning and performance management solutions, security server (RACF) consulting services, Transaction Server (CICS), and the Websphere products for Internet commerce solutions. BCI's services cover all IBM series platforms including the Z-, P-, I-, and X-series processors. For more information, please visit our Web site at: www.baer-consulting.com or call (303) 838-3374.

About SecureAgent Software
SecureAgent Software develops data center enhancement solutions that improve efficiency and reduce operational costs while increasing productivity. Fortune 500 companies have implemented our advanced technology solutions to meet rigid service level agreements, comply with increasingly rigorous state and federal regulatory guidance, and ensure the preservation of intellectual property and stockholder value. For over 20 years, our patented products have provided organizations with data backup and recovery, enterprise management, console consolidation, and remote access capabilities. For additional information, please visit our Web site at: www.secureagent.com or call (918) 971-1600.
